

Understanding Female Sexual Propensities From a Taoist Tantra Perspective Through Facial and Breast Diagnosis

In the Taoist sex manual *Yu Fang Mi Chueh (Secret Codes of the Jade Room)*, reportedly written around 4 A.D., it states that it is possible to determine a female's sexual propensity by scrutinizing her face and other body features. These may or may not be accurate for everyone, you will have to determine this for yourself. But here they are:

1. Facial Diagnosis

- A woman with a small mouth and short fingers has a very shallow vaginal opening and so is easy to satisfy.
- A woman with a big mouth and big lips has a large labia and so is difficult to satisfy.
- A woman with deep-set eyes has a deep vaginal opening as well, but is very passionate.
- A woman who has big bright eyes has a narrow vaginal opening, yet very accommodating inside, and loves to be seduced.
- A woman with two dimples on her cheeks is tight and narrow down below, but is shy and fearful about sex.

2. A Few Other Attributes

- Women with small areolas and nipples make good mothers.
- Women with large areolas are very sexual and passionate mates.
- When a woman scratches her collarbone and upper chest, she is showing sexual desire.
- When a woman playfully slaps or pushes on a man, she is showing desire for him.
- When a woman rubs on her inner thighs, she shows she is sexually attracted.

3. During foreplay

- A woman with small thin eyes likes the man to release his erection and place her hand on it.
- A woman with big bright eyes prefers to touch and release the erection herself.
- A woman with deep-set eyes likes for a man to go slow and to undress at the appropriate time.
- A woman with droopy eyes must be encouraged to touch the man's penis.

- A woman with squinty eyes is always nervous about seeing and touching an erection.

4. Breast Descriptions

These breast descriptions are attributed to some sexual alchemy manuals in ancient China. While they are not scientifically proven, many have found them fairly accurate and useful. There are 8 different types that correspond with the I Ching trigrams.

1. Heaven Type: Large, circular, and pinkish colored areolas (three inches in diameter or more) reveal a female who loves sex and seeks to give pleasure. She is very sensitive and easily excited from being touched and fondled. She desires all types of men and prefers very large penises. Show her affection, humor, and compliments and she will be open to your advances.

2. Valley Type: Slightly puffed areolas (around two inches in diameter) with inverted nipples reveal a female who prefers to bond with just one man and infrequently engages in sexual activity. She is curious about sex, but fondling does not excite her nearly as much as being cuddled. She prefers men who are totally into her and the penis type is of little concern. Show her generosity, steady interest, and fun activities and she will gradually become more sensual.

3. Fire Type: Hard looking and light colored with perfect small circular areolas (one inch in diameter or less) reveal a woman who is very aggressive about sex. She is more excited by immediate actual sexual activity than with foreplay. She likes most reasonably

attractive men who maintain erections for a long period. Show her seriousness and need and she will open to your advances.

4. Thunder Type: Prominent, puffy, swollen and pinkish areolas (two inches in diameter or less) reveal a female who is independent and easily excited. She loves to tease and be the center of attention, but once she is engaged in sexual passion she is feverish in her demeanor. She prefers men of some note and prominence, and does not really distinguish penis types. Love at first sight is her modus operandi. So catch her attention and seize the moment.

5. Wind Type: Small, darker colored areolas (one inch in diameter or less) reveal a female who cannot concentrate on sexual activity and is in need of direction. She is very giving, however, once stimulated. She prefers men who seek to take care of her, and likes very sensitive and quick to ejaculate penises. Show her kindness, generosity, and honesty and she will gradually relax into the encounter.

6. Water Type: Dark, larger areolas (two inches in diameter or more) that are slightly oval in shape reveal a women who prefers to be fondled in a spontaneous manner, and prefers men to advance with her sexually when she shows interest. She prefers men who are not too handsome and who have very thick penises. Show her generosity, excitement, and love and she will want to be with you.

7. *Mountain Type:* Dark, protruding, and an areola more elongated than wide (one inch in diameter or more) reveals a female who is aloof about sex. Yet underneath this aloofness she desires her breasts to be fondled. Show her strength, determination, and perseverance and eventually she will be yours.

8. *Earth Type:* Large, circular, and dark colored areolas (three inches in diameter or more) reveal a very sexually giving female. She is sexually nourishing to all men who show her respect and discretion. Show her love, need, and kindness and she will be open to your advances.
